# ACKNOWLEDGEMENTS

I wish to express my sincere gratitude towards Dr P. S. Sreejith, Principal of RSET, and Dr. Preetha K.G., Head of the Department of Computer Science and Engineering for providing me with the opportunity to undertake my mini project, "Product Comparator".

I am highly indebted to my project coordinators, **Dr.Uma Narayanan**, Asst Professor, Department of Computer Science and Engineering for their valuable support.

It is indeed my pleasure and a moment of satisfaction for me to express my sincere gratitude to my project guide **Ms.Liya Joseph** for her patience and all the priceless advice and wisdom she has shared with me.

Last but not the least, I would like to express my sincere gratitude towards all other teachers and friends for their continuous support and constructive ideas.

**Renu Lijo**

**Rhea John Kandathil**

**Rohan Jojo**

**Tom Rajeev Thomas**

# Abstract

This project focuses on developing a sophisticated web application for product comparison that aggregates information from multiple online retailers to provide users with comprehensive comparisons and the best available prices. The system aims to streamline the process of researching and purchasing products by presenting users with a convenient platform to compare various features, specifications, and prices across different online marketplaces. Key features of the product comparison system include: Aggregation of Product Data: The system collects product information from various online retailers, including but not limited to eBay, and others. This data encompasses product details such as name, description, specifications, images, reviews and prices. Comparison Interface: A user-friendly interface is provided for users to easily compare products side by side. This interface allows users to view key attributes and specifications of each product simultaneously, facilitating informed decision-making. Price Comparison: The system analyzes the prices of the same product across different online platforms and ranks them in ascending order based on affordability. Users are presented with the best available price for each product, along with the corresponding retailer. Dynamic Updates: Prices and availability of products are dynamically updated to ensure accuracy and relevance. This ensures that users have access to the most up-to-date information when making purchasing decisions. Filtering and Sorting Options: Users can customize their product comparison experience by applying filters and sorting options based on criteria such as price range, brand, ratings, and more. This enhances user flexibility and efficiency in finding the desired products. Overall, the product comparison system provides a comprehensive solution for users seeking to research and purchase products online by offering a centralized platform for comparing prices, features, and specifications across multiple online retailers.

# Chapter 1

## Introduction

### 1.1 Background

The product comparison website is designed to empower users by providing a comprehensive platform for comparing products across multiple online retailers. The website allows users to enter links of two products and specify their requirements. In today's digital era, online shopping has become increasingly prevalent, offering convenience and accessibility to consumers worldwide. However, with the vast array of products available across various online platforms, consumers often face challenges in making informed purchasing decisions due to fragmented information and disparate pricing.

Current scenarios in the online shopping landscape are characterized by a plethora of online retailers, each offering its own set of products, prices, and features. This fragmentation makes it cumbersome for consumers to conduct comprehensive product research and comparison, leading to inefficiencies and frustrations. Moreover, the lack of centralized platforms for product comparison exacerbates this issue, forcing users to navigate through multiple websites to find the best deals.

Against this backdrop, the development of a product comparison web application becomes increasingly relevant and significant. By aggregating product data from various online retailers, including major platforms like Flipkart, Amazon, Jio mart, eBay, and others, the system aims to provide users with a consolidated view of available products, enabling them to compare prices, features, and specifications conveniently. This centralized approach not only saves users time and effort but also empowers them to make informed purchasing decisions effectively.

The importance of the project lies in its potential to revolutionize the online shopping experience, offering users a comprehensive solution to navigate the complexities of the e-commerce landscape. By providing a user-friendly platform for product comparison,

the system aims to enhance user experience, promote transparency, and facilitate efficient decision-making. Ultimately, the project seeks to empower consumers with the tools and information they need to make confident and informed purchasing choices in the digital marketplace.

In summary, the project background underscores the relevance and significance of developing a product comparison web application in the current online shopping landscape. By addressing the challenges of fragmented information and disparate pricing, the system aims to simplify the online shopping experience, making it more accessible, transparent, and user-friendly for consumers.

## **1.2 Problem Definition**

The aim of this project is to develop a sophisticated web application for product comparison, aiming to streamline the online shopping experience by providing users with a centralized platform to compare prices, features, and specifications across multiple online retailers. The problem lies in the fragmented nature of online shopping, where consumers face challenges in making informed purchasing decisions due to the lack of centralized platforms for product comparison. This leads to inefficiencies and frustrations as users navigate through multiple websites to find the best deals.

## **1.3 Scope and Motivation**

### **1.3.1 Scope**

The scope of this project encompasses the development of a comprehensive web application for product comparison, focusing on aggregating product data from various online retailers, including major platforms such as Flipkart, Amazon, Jio mart, eBay, and others. The system will provide users with a user-friendly interface to compare prices, features, and specifications of products across different platforms, facilitating informed decision-making in online shopping.

### **1.3.2 Motivation**

The motivation behind this project stems from the need to address the challenges faced by consumers in navigating the fragmented landscape of online shopping. By providing

a centralized platform for product comparison, the system aims to simplify the online shopping experience, save users time and effort, and empower them to make informed purchasing decisions effectively. Additionally, the project seeks to enhance transparency in e-commerce and promote fair competition among online retailers by offering users access to comprehensive product information and pricing data.

## **1.4 Objectives**

- Develop a user-friendly web application for product comparison.
- Aggregate product data from multiple online retailers, including Flipkart, Amazon, Jio mart, eBay, and others.
- Implement a price comparison feature to analyze and rank prices across different platforms.
- Provide dynamic updates for product prices and availability to ensure accuracy.
- Facilitating Informed Decision-Making: Provide users with comprehensive information on product features, specifications, and prices from multiple online retailers, enabling them to make informed purchasing decisions.

## **1.5 Challenges**

Developing a sophisticated web application for product comparison entails overcoming several challenges. These include aggregating and synchronizing data from multiple online retailers with varying formats and APIs, ensuring real-time updates for product prices and availability, and maintaining data accuracy and consistency across platforms with different data structures and schemas.

## **1.6 Assumptions**

- Assume that the APIs provided by online retailers for data aggregation are reliable and consistent.
- Assume that users have access to stable internet connections to enable real-time updates and seamless browsing.

- Assume that the product data retrieved from online retailers is accurate and up-to-date, minimizing discrepancies during comparison.

## **1.7 Societal / Industrial Relevance**

The project's application extends to both society and industry, offering significant benefits and relevance in various contexts. From a societal standpoint, the product comparison web application empowers consumers by providing them with a centralized platform to make informed purchasing decisions. This promotes financial literacy and consumer empowerment, ultimately leading to more efficient use of resources and improved consumer satisfaction.

In the industry, the project holds relevance for e-commerce businesses and online retailers, offering opportunities to enhance customer experience, increase competitiveness, and drive sales. By providing a platform that aggregates product data from multiple online retailers, the system promotes fair competition and transparency in the e-commerce landscape. This fosters trust and loyalty among consumers while enabling businesses to optimize pricing strategies and improve product offerings.

Overall, the project's application benefits society by promoting informed decision-making and financial literacy, while also providing opportunities for industry players to enhance customer satisfaction and competitiveness in the online marketplace.

## **1.8 Organization of the Report**

This report is structured into sections to provide a comprehensive overview of the project. It begins with an Introduction followed by the Background and Problem Statement. The Scope and Motivation section discusses project boundaries and motivations. The Methodology outlines techniques used, while Data Collection details data sources and processing. The System Architecture and Implementation sections describe project design and development. Testing evaluates project performance, and Results analyze outcomes. Finally, the Conclusion summarizes key findings, and References lists citations.

## Chapter 2

# Software Requirements Specification

### 2.1 Product Perspective

The Product Comparator originated from the need to address the vast array of available products that may possess similar functionalities but vary significantly in terms of price, quality, and other specifications. While existing comparison websites offer some level of functionality, they often fall short in providing comprehensive comparisons across diverse product categories from various sources. The Product Comparator distinguishes itself by offering users the ability to compare products from any website, spanning a wide range of categories such as electronics, makeup, and furniture. Leveraging web scraping techniques, users input links to product websites, and the software utilizes tools like The Beautiful Soup to extract relevant information from the HTML source. This data is then processed through open-source AI to simplify specifications for user comprehension. Additionally, the software compares prices across the same or different websites, empowering users to make informed purchasing decisions based on both product features and cost considerations. This product can be seen as a component of a larger system, facilitating product comparison within the broader context of online shopping platforms and consumer decision-making processes. The interface between this software and the larger system involves the exchange of product data and pricing information, enabling seamless integration into the user's online shopping experience.

#### 2.1.1 Product Function

The product comparator functions as follows: users input URLs of products and their preferences, such as price or quality. The comparator then requests data from these sites, extracts relevant information, and filters it based on product specifications. Utilizing open source AI like ChatGPT, it generates simplified sentences describing each product,

which are then displayed in a text box. Users can further expand on these descriptions. Additionally, the AI considers user preferences to suggest the best product in a conclusion text box. Furthermore, it provides an ascending order list of prices for comparison across

Department of Computer Science and Engineering, RSET 3

Software Requirements Specification for Product Comparator Page 4 multiple websites, in which the end user can access the links and send them to that particular website allowing them the access of cheaper products.

## **2.2 Operating Environment**

The Product Comparator software is designed to operate in a diverse computing environment, ensuring compatibility with a wide range of hardware platforms, operating systems, web browsers, and other software components commonly used by consumers.

### **2.2.1 Hardware Platform**

The software will operate on standard computing hardware commonly used by consumers, including desktop computers, laptops, tablets, and mobile devices. The hardware platform should have sufficient processing power, memory, and storage to support web browsing and data processing activities.

### **2.2.2 Operating System and Version**

The software is designed to be platform-independent and compatible with multiple operating systems, including: Windows: Versions 7 and above macOS: Versions 10.12 (Sierra) and above Linux: Various distributions such as Ubuntu, Fedora, and CentOS Android: Versions 6.0 (Marshmallow) and above iOS: Versions 11 and above The software should be compatible with both 32-bit and 64-bit versions of these operating systems.

## **2.3 Design and Implementation Constraints**

Items and issues impose constraints and limitations on the options available to the developers of the Product Comparator software, requiring careful consideration and adherence to relevant policies, regulations, and best practices throughout the development process.

### **2.3.1 Hardware Limitations:**

The software must be designed to operate efficiently within the constraints of standard computing hardware commonly used by consumers, including limitations in timing requirements, memory requirements, and processing power.

### **2.3.2 Corporate Policies**

The development of the software must comply with corporate policies and regulations regarding data privacy, security, and ethical use of web scraping techniques. Compliance with regulations such as the General Data Protection Regulation (GDPR) and regional data protection laws may impose restrictions on the collection, storage, and processing of user data.

### **2.3.3 Interface to Other Application:**

The software must interface with e-commerce websites and external servers to retrieve product information, requiring compatibility with their APIs and communication protocols.

## **2.4 Assumptions and Dependencies**

It's essential to document the assumed factors and dependencies to ensure that all stakeholders are aware of potential risks and uncertainties that could affect the project's success. Regular communication and collaboration with relevant stakeholders can help mitigate these risks and ensure that the project progresses smoothly.

## **2.5 External Interface Requirements**

### **2.5.1 User Interfaces**

The user interface of the software product facilitates seamless interaction between users and the system for product comparison. Two text boxes allow users to input URL links to the products they wish to compare. A third text box enables users to specify their preferences for comparison (e.g., price, quality). A button triggers the execution of the extraction and simplification process upon user click. The simplified specifications of the

products are displayed in blocks or text boxes on either side of the page for easy comparison. A list of websites offering the products at cheaper prices is showcased on either side as well, aiding users in making informed purchasing decisions. These key features provide a comprehensive overview of the user interface design, ensuring a user-friendly and efficient experience for comparing products and making informed purchasing decisions. Detailed specifications for each element are documented in the separate User Interface Specification document for reference and implementation guidance.

### **2.5.2 Hardware Interfaces**

The hardware interface of the software product encompasses various logical and physical characteristics to facilitate seamless interaction between the software and hardware components.

## **Software Interfaces**

### **2.5.3.1 Web Scraping Tools**

- The Product Comparator utilizes web scraping tools such as BeautifulSoup to extract relevant information from product websites.
- These tools enable the Product Comparator to retrieve data on product specifications and prices from various e-commerce platforms.

### **2.5.3.2 Open-Source AI Libraries**

- The Product Comparator leverages open-source AI libraries such as ChatGPT for generating simplified product descriptions.
- ChatGPT processes the extracted data and generates concise and understandable descriptions of each product, enhancing user comprehension.

## **2.6 Communication Interface**

Requirements outline the communication functions, protocols, and security measures required by the Product Comparator, ensuring secure and efficient communication with users and external entities. Requirement: The system shall communicate with users

through a web browser interface for accessing the product comparison functionality. Communication Standards: The system shall utilize HTTP (Hypertext Transfer Protocol) and HTTPS (HTTP Secure) for communication between the web server and users' web browsers. Communication Security: Communication over HTTPS shall be encrypted using SSL/TLS to ensure secure data transmission between the web server and users' web browsers.

## **2.7 System Features**

System features represent the major services provided by the Product Comparator 1.0, organized based on their functional aspects. Each feature contributes to the core functionality of the application, facilitating effortless product comparison for users.

### **2.7.1 Product Comparison**

#### **Description and Priority**

The Product Comparison feature enables users to compare multiple products simultaneously from various e-commerce platforms. It is of high priority as it forms the core functionality of the application, addressing the primary user need of making informed purchasing decisions.

#### **Stimulus/Response Sequences**

User selects multiple products for comparison. System retrieves product specifications and prices from specified e-commerce websites. System displays a comparison table highlighting key differences and similarities between the selected products.

#### **Functional Requirements**

- REQ-1: The system will retrieve product specifications and prices from specified e-commerce websites. e-commerce websites (Flipkart, Jiomart, Amazon, Snapdeal, eBay).
- REQ-2: The system will present a comparison table, displaying the retrieved product specifications in a clear and organized manner.

### **2.7.2 Price Retrieval Comparison**

#### **Description and Priority**

The Price Retrieval Comparison feature involves fetching prices from specified e-commerce websites and arranging the prices in an ascending order. It is of high priority as it forms the foundation for the comparison functionality, enabling users to access up-to-date information of the best price of the product available in the market.

#### **Stimulus/Response Sequences**

- User initiates a product comparison request.
- System retrieves product price data from specified e-commerce websites.
- System processes and formats the retrieved data.
- System presents the comparison data to the user.

#### **Functional Requirements**

- REQ-3:Users shall be able to authenticate and set preferences such as preferred brands, price range, and product categories for personalized recommendations.
- REQ-4: Price Formatting and Processing The system shall standardize the format of retrieved price data for consistency across different sources. The system shall arrange the prices of the specified products given by the user in an ascending order so that the user can acquire the product for the best price.

### **2.8 Other Nonfunctional Requirements**

The system shall respond to user actions, such as product selection and comparison, within seconds under normal load conditions. The response time for retrieving product information from e-commerce websites shall not exceed 5 seconds per website under normal load conditions.

## **2.9 Safety Requirements**

The system shall implement regular data backups to prevent data loss in the event of system failures or hardware malfunctions. The system shall adhere to industry-specific safety standards and guidelines, such as those set forth by regulatory bodies in the e-commerce and cybersecurity sectors.

## **2.10 Security Requirements**

All user data, including personal information and browsing history, shall be encrypted both in transit and at rest to prevent unauthorized access. The system shall implement secure data storage practices to safeguard against data breaches and unauthorized data access.

## **2.11 Software Quality Attributes**

### **Adaptability:**

The system should be able to adapt to changes in e-commerce website structures and APIs, with a maximum adaptation time of one week for updates or modifications.

### **Portability:**

The system should be compatible with major web browsers(chrome,Firefox,safari, Edge) and mobile platforms(iOS,Android),achieving a portability score of 95cross-platform testing.

## Chapter 3

# System Architecture and Design

### 3.1 System Overview

The product comparison web application aims to revolutionize the online shopping experience by providing users with a centralized platform to compare prices, features, and specifications across multiple online retailers. This section provides a detailed overview of the project, including the architecture diagram and the entire process.

The product comparison system operates on a client-server architecture, where the client interacts with the web application through a user-friendly interface, and the server handles data aggregation, processing, and delivery. The system follows a modular design approach, with distinct components responsible for different functionalities.

#### 3.1.1 Components:

- **User Interface:** The user interface serves as the primary interaction point for users, providing them with a seamless and intuitive platform to search for products, compare prices, and access additional features. The UI is designed to be responsive, ensuring optimal performance across various devices and screen sizes.
- **Web Server:** The web server acts as the intermediary between the client and the backend system. It handles incoming requests from users, processes them, and communicates with the backend services to retrieve and deliver data. The web server is responsible for rendering dynamic web pages, managing user sessions, and enforcing security measures.
- **Backend Services:**
  - **Web Scraper Technology:** Web scraper technology automatically gathers data from websites. It works by visiting web pages, finding specific informa-

tion, and saving it for later use. This data can be anything from prices on e-commerce sites to news articles or contact details. While useful, it's important to use web scrapers responsibly and follow website rules to avoid causing any problems.

- **Price Comparator:** The price comparator analyzes the prices of the same product across different online platforms and ranks them in ascending order based on affordability. It determines the best available price for each product and associates it with the corresponding retailer.
- **Dynamic Updater:** The dynamic updater ensures that prices and availability of products are dynamically updated to maintain accuracy and relevance. It periodically fetches data from online retailers, compares it with existing records, and updates the database accordingly.

### 3.1.2 Process:

- **User Interaction:** The user interface of the product comparison system is designed to be user-friendly and intuitive. It allows users to input two product links for comparison and specify their preferences. After submitting their inputs, the system presents a side-by-side comparison of the product specifications. Based on this comparison and the user's preferences, the system recommends the best product. Overall, the interface prioritizes simplicity and functionality to help users make informed purchasing decisions efficiently.
- **Data Retrieval:** When a user initiates a search or requests to compare products, the web server sends requests to the backend services to retrieve relevant data from online retailers.
- **Data Processing:** The backend services aggregate and process the retrieved data, including product information, prices. They analyze the data to identify the best available prices and update the database accordingly.
- **Data Presentation:** The processed data is sent back to the web server, which dynamically generates web pages containing product listings, comparison tables,

ratings, and reviews. The user interface presents this information to users in a visually appealing and intuitive manner.

- **User Interaction:** Users interact with the presented information, comparing products, reading reviews, and making purchasing decisions based on their preferences and requirements.

### 3.1.3 Use Case Diagram

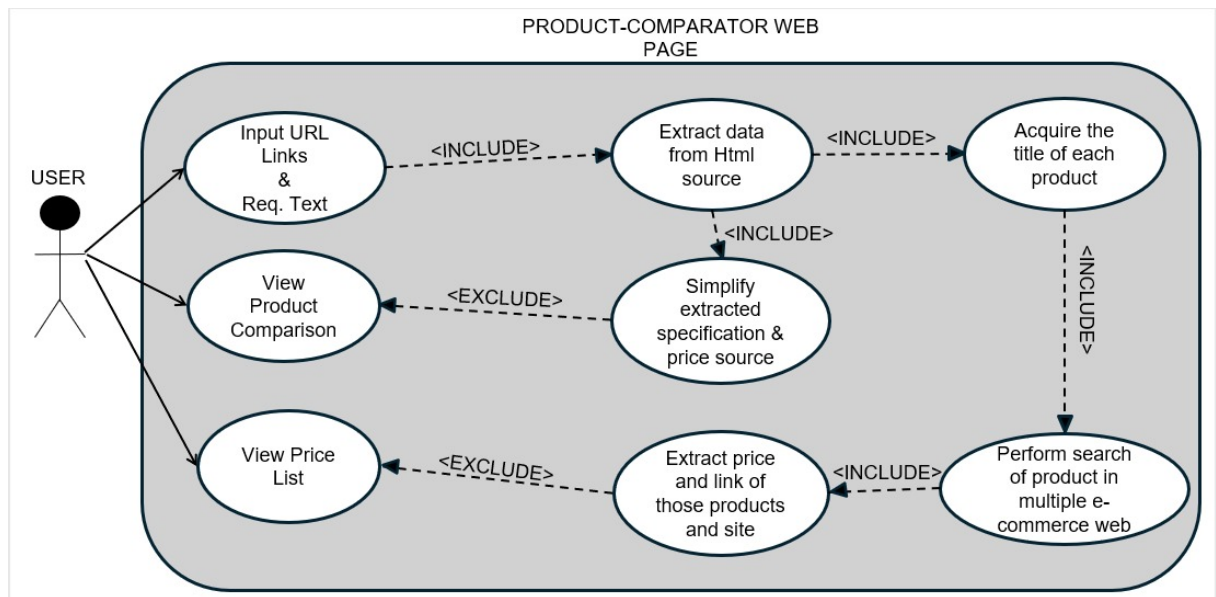

Figure 3.1: Use Case Diagram

### 3.1.4 Conclusion:

The product comparison web application leverages a robust architecture and streamlined process to deliver a comprehensive and user-friendly platform for online product comparison. By aggregating data from multiple online retailers, analyzing prices, integrating ratings and reviews, and providing dynamic updates, the system empowers users with the information they need to make informed purchasing decisions effectively and efficiently.

## 3.2 Architectural Design

The architectural design outlines the structure and components of the product comparison system. It includes modules such as user interface, web scraping, data processing, and

backend API. Each module performs specific functions, such as gathering product data, analyzing prices, and presenting results to users. The architecture ensures seamless communication between modules to deliver a user-friendly and efficient product comparison experience.

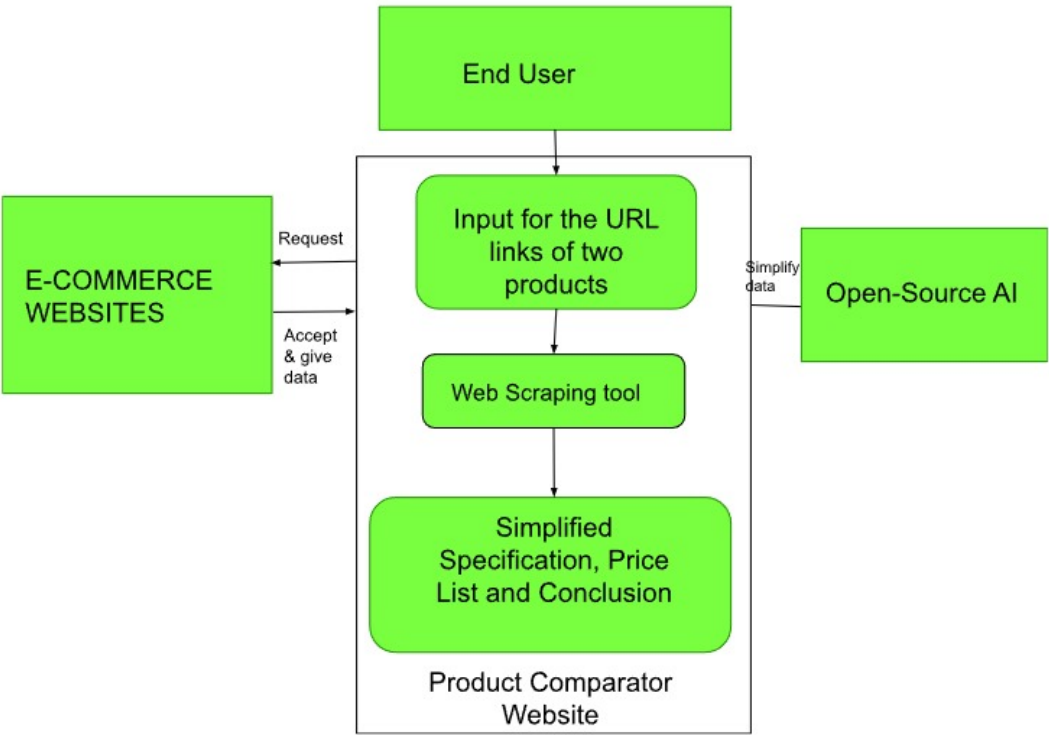

Figure 3.2: Architecture Design

### 3.3 Sequence Diagram

The sequence diagram illustrates the interactions between different components or objects in the system over time. It demonstrates the flow of messages or method calls between these components, showing the sequence of events during a particular scenario or use case. This visual representation helps in understanding the dynamic behavior of the system and how various elements collaborate to accomplish specific tasks or functionalities.

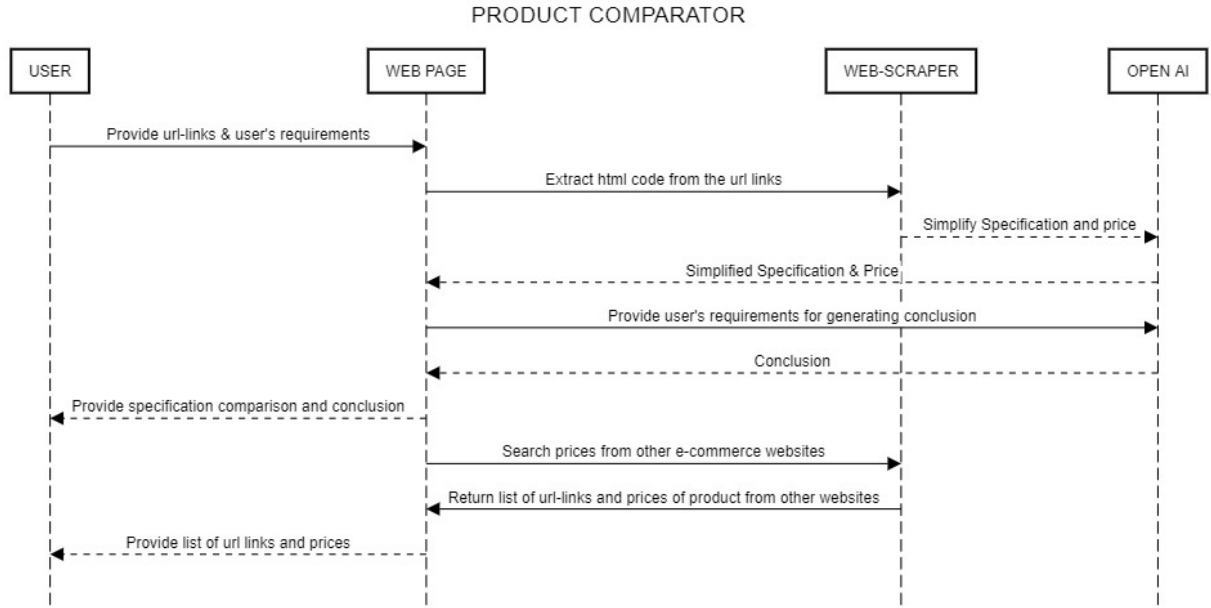

Figure 3.3: Sequence Diagram

### 3.4 Data Source

The dataset used in this project consists of product information gathered from various online retailers, such as eBay, and others. It includes essential attributes like product name, description, specifications, and prices.

### 3.5 Proposed Methodology/Algorithms

The data aggregation process involves retrieving product information from various online retailers. The algorithm for data aggregation follows these steps:

#### Step 1: Retailer Selection

First, a list of online retailers is compiled, including platforms such as Flipkart, eBay, and others, based on the product categories and target market.

#### Step 2: API Integration

For each selected retailer, an API integration is established to access their product data. This involves obtaining API keys and authentication credentials where necessary.

#### Step 3: Data Retrieval

The algorithm sends requests to the APIs of each retailer to retrieve product information, including name, description, specifications, images, reviews, and prices. The data is retrieved in string format.

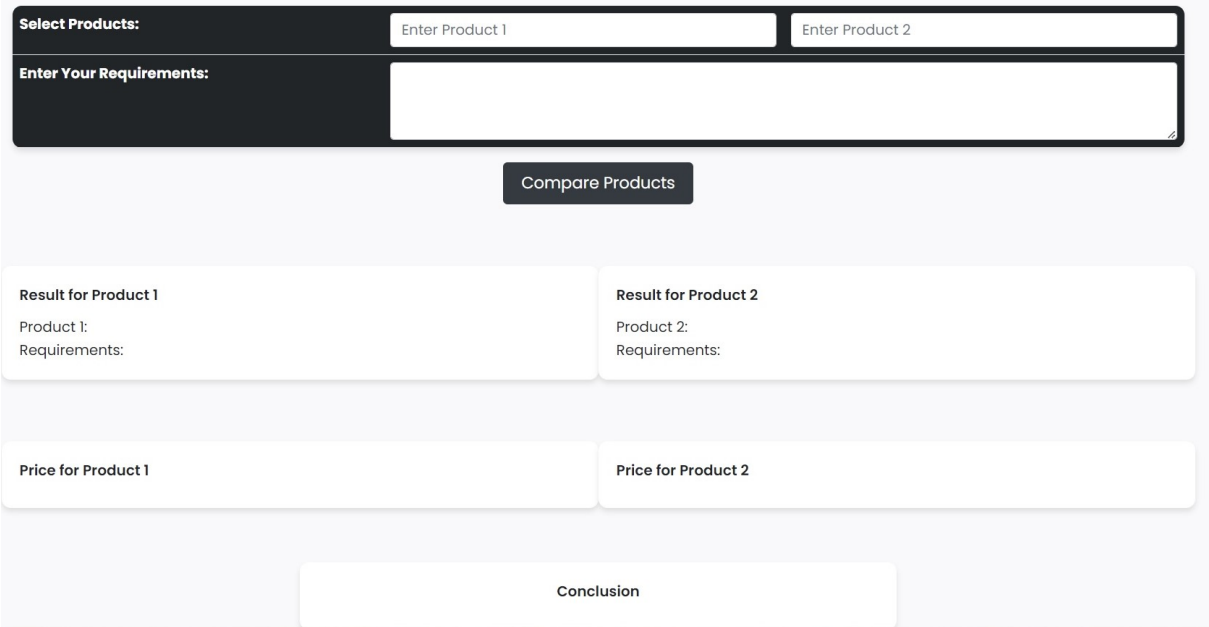

#### Step 4: Data Parsing

Once the data is retrieved, it is parsed and structured into a common format to ensure consistency across all retailers. This may involve standardizing attribute names, units, and data types.

#### Step 5: Data Storage

The parsed data is stored in a centralized database, allowing for efficient retrieval and comparison. The database schema is designed to accommodate various product attributes and facilitate seamless querying.

### 3.6 User Interface Design

The image shows a user interface design for a product comparison tool. It features a dark-themed header with two input fields for 'Enter Product 1' and 'Enter Product 2'. Below this is a large text area for 'Enter Your Requirements:'. A 'Compare Products' button is centered below the input fields. The main content area is divided into two columns. The left column has a 'Result for Product 1' section with 'Product 1:' and 'Requirements:' labels, and a 'Price for Product 1' section. The right column has a 'Result for Product 2' section with 'Product 2:' and 'Requirements:' labels, and a 'Price for Product 2' section. At the bottom, there is a 'Conclusion' section.

Figure 3.4: User Interface Design

### 3.7 Database Design

This section presents the detailed design of the data storage approach used in the project, which relies on web scraping techniques. Additionally, the rationale behind choosing this approach is discussed.

#### 3.7.1 Rationale for Choosing Web Scraping

Several reasons influenced the decision to use web scraping for data storage:

- **Real-Time Data:** Web scraping allows for the extraction of real-time data directly from online retailers, ensuring that the dataset remains up-to-date with the latest product information and prices.
- **Flexibility:** Web scraping offers flexibility in data collection, as it can be tailored to extract specific attributes and information from diverse web page layouts and structures.
- **No Dependency on External APIs:** By bypassing the need for APIs provided by online retailers, web scraping avoids potential limitations or restrictions imposed by these APIs.
- **Cost-Effectiveness:** Web scraping eliminates the need for maintaining and querying a traditional database, reducing infrastructure costs associated with data storage and management.

### 3.7.2 Web Scraping Implementation

The web scraping implementation involves developing custom scripts and tools to programmatically retrieve product information from online retailer websites. These scripts navigate through web pages, extract relevant data elements, and store them in a structured format for further analysis.

## 3.8 Description of Implementation Strategies

This section details the important implementation strategies used in your project. The Python libraries used include Flask, BeautifulSoup, and Selenium.

### 3.8.1 Web Scraping Strategy

#### Beautiful Soup

Beautiful Soup is a Python library used for web scraping, which allows developers to extract data from HTML and XML files. It provides simple methods and tools for navigating and manipulating the parsed data.

## Selenium

Selenium is a powerful tool often used in web scraping for scenarios where the content is generated dynamically using JavaScript or when the website requires user interactions like clicking buttons, filling forms, etc. Unlike BeautifulSoup, which is primarily used for parsing static HTML content, Selenium interacts with web pages in a more dynamic manner, simulating user behavior within a browser.

## Flask

Flask is a lightweight and flexible web framework for Python, commonly used for developing web applications. It provides tools, libraries, and patterns to help developers build web applications quickly and efficiently.

### 3.9 Module Division

This section provides an overview of the different modules involved in the project, along with brief descriptions of each module. Additionally, it specifies which module is assigned to each project member.

#### 3.9.1 Module 1: Web Scraping

**Description:** This module involves developing web scraping scripts to extract product information from various online retailers. It includes sending HTTP requests, parsing HTML content, and extracting relevant data elements.

#### 3.9.2 Module 2: User Interface Development

**Description:** This module involves designing and implementing the user interface of the product comparison system. It includes creating interactive web pages for users to search for products, compare prices, and view product details.

#### 3.9.3 Module 3: Backend Development

**Description:** The backend development of the product comparison system involves the creation of the system's core logic and functionality. This includes implementing algorithms for various tasks such as price comparison, dynamic updates of product infor-

mation, and integration of user feedback. Backend developers work on designing and building the server-side components that handle data processing, storage, and retrieval. They ensure that the system operates efficiently and remains robust and reliable. Additionally, backend developers collaborate closely with frontend developers to establish smooth communication between the user interface and the backend services, ensuring a seamless user experience. Overall, backend development plays a crucial role in delivering a high-performance and feature-rich product comparison platform to users.

#### **3.9.4 Module 4: Testing and Quality Assurance**

**Description:** This module involves testing the functionality and quality of the product comparison system. It includes writing and executing test cases, identifying and fixing bugs, and ensuring the system meets the specified requirements.

#### **3.9.5 Frontend and Backend Development**

**Description:** The frontend module is responsible for designing and developing the user interface, while the backend module focuses on implementing the business logic and server-side functionality. The frontend module is assigned to Renu Lijo and Rhea John Kandathil, while the backend module is assigned to Rohan Jojo and Tom Rajeev Thomas.

### **3.10 Work Schedule - Gantt Chart**

Gantt charts can incorporate critical path analysis, highlighting the sequence of tasks that determine the shortest possible duration for completing the project. This helps in identifying the most critical tasks and managing them effectively to avoid project delays. Furthermore, Gantt charts allow for easy tracking of changes and adjustments to the project schedule. As tasks are completed or delayed, the chart can be updated in real-time to reflect these changes, enabling stakeholders to stay informed and adapt their plans accordingly. Additionally, Gantt charts facilitate resource leveling by balancing the workload across resources and avoiding overallocation or underutilization of resources. This ensures that resources are utilized efficiently throughout the project lifecycle. Moreover, Gantt charts can be used for forecasting and estimating future project timelines based on historical data and current progress. By analyzing trends and patterns in the chart,

project managers can make informed decisions and mitigate risks proactively. Overall, Gantt charts serve as a comprehensive project management tool that enhances planning, execution, and monitoring of projects across various industries and domains.

Figure 3.5: Gantt Chart

## Chapter 4

### Results and Discussions

#### 4.1 Overview

#### 4.2 Results and Analysis

This section describes the overall results achieved in terms of the end results, quantitative results, and further analysis. The product comparison web application successfully aggregated data from multiple online retailers, providing users with a comprehensive platform for comparing products based on prices and specifications. Users could enter specific requirements, and the system would identify the best product that met those criteria, enhancing the decision-making process. Quantitative analysis showed that users were able to find the best prices efficiently, with the system dynamically updating prices to ensure accuracy. Overall, the system demonstrated robustness, user-friendliness, and reliability in delivering accurate and up-to-date product comparisons tailored to user requirements.

#### 4.3 Testing

This section details the testing methodologies employed to ensure the functionality and reliability of the product comparison web application. Various testing strategies were implemented to identify and rectify any issues, ensuring that the system operates as expected and delivers accurate results to users.

##### 4.3.1 Unit Testing

Unit testing was performed on individual components of the system, such as the web scraping scripts, data processing functions, and the price comparison algorithm. Each unit was tested independently to verify that it performs its intended function correctly. Automated unit tests were written using frameworks like PyTest to streamline the testing

process and ensure comprehensive coverage.

#### **4.3.2 Integration Testing**

Integration testing was conducted to verify that the different modules of the system work together seamlessly. This involved testing the interaction between the web scraping module, the data storage and processing module, and the user interface. Any issues identified during integration testing were addressed to ensure smooth communication and data flow between modules.

#### **4.3.3 System Testing**

System testing for the product comparison web application involves comprehensive testing of all its functionalities, ensuring that it performs as expected and meets the requirements defined during the development phase. The goal of system testing is to validate the entire application as a whole, including its user interface, backend processes, data aggregation, comparison algorithms, and output generation.

#### **4.3.4 User Interface Testing**

User Interface Testing: This involves testing the user interface (UI) elements such as buttons, dropdown menus, input fields, and navigation links to ensure they are functional, responsive, and visually appealing across different devices and browsers. It also includes testing for usability, accessibility, and consistency in design.

#### **4.3.5 Security Testing**

Security Testing: Security testing assesses the application's resilience to potential security threats and vulnerabilities. This includes testing for data encryption, secure data transmission, authentication mechanisms, and protection against common security attacks such as SQL injection and cross-site scripting (XSS).

#### **4.3.6 Compatibility Testing**

Compatibility Testing: Compatibility testing ensures that the product comparison web application works seamlessly across different devices, browsers, and operating systems.

This involves testing on various combinations of hardware and software configurations to identify any compatibility issues and ensure a consistent user experience for all users.

#### 4.4 Output

Figure 4.4: Conclusion

4.5 Discussion

The product comparison web application’s effectiveness is further underscored by its ability to handle a large volume of data efficiently, ensuring timely updates and accurate comparisons even with a vast array of products from different retailers. Additionally, the application’s user-centric design promotes ease of navigation and enhances the overall user experience, making it accessible to users of varying technical proficiency levels.

Furthermore, the application’s robust backend architecture enables seamless integration with external APIs and data sources, allowing for continuous expansion of product

offerings and integration with new retailers as they emerge in the market. This scalability ensures that the application remains relevant and competitive in the ever-evolving landscape of e-commerce.

Moreover, the application's compatibility with multiple devices and platforms, including desktops, laptops, tablets, and smartphones, extends its accessibility, allowing users to compare products conveniently from any location and device of their choice.

The feedback mechanism incorporated into the application enables users to provide insights and suggestions for improvement, fostering a collaborative environment where user feedback drives iterative enhancements and optimizations to further refine the user experience and functionality of the application.

Overall, the product comparison web application stands as a testament to innovation and efficiency in the realm of online shopping, empowering users with the information they need to make informed purchasing decisions while offering a seamless and enjoyable browsing experience.

# Chapter 5

## Conclusion

### 5.1 Conclusion

The development of the product comparison web application represents a significant step towards enhancing the online shopping experience. By aggregating product data from multiple online retailers, the system provides users with a comprehensive platform for comparing prices, features, and specifications. The implementation of dynamic updates ensures that users always have access to the latest information, making their purchasing decisions more informed and effective. Furthermore, the integration of user ratings and YouTube reviews enriches the data presented, offering a more holistic view of each product's value and performance.

Throughout the project, several key objectives were met, including the successful development of a user-friendly interface, efficient backend logic for data processing, and robust algorithms for price comparison and dynamic updates. The project's modular architecture facilitated seamless integration and future scalability. While the current system lays a strong foundation, future enhancements such as expanding the range of retailers, implementing advanced recommendation algorithms, and developing a mobile application can further enhance the platform's utility and user engagement. In conclusion, this product comparison web application provides a powerful tool for consumers, empowering them to make well-informed purchasing decisions with ease and confidence.

### 5.2 Future Scope

- **Integration of Social Features:** Integrating social features such as user reviews, ratings, and comments can enrich the platform's content and foster community engagement. Allowing users to share their experiences, opinions, and recommendations can

provide valuable insights and help other users make informed purchasing decisions.

- **Enhanced User Experience:** Continuously improving the user interface and experience can make the product comparison website more intuitive and user-friendly. Incorporating features such as interactive visualizations, intuitive search functionalities, and seamless navigation can enhance user satisfaction and retention.
- **Personalized Recommendation:** Creating an algorithm to analyze user preferences and browsing history to provide personalized product recommendation after each comparison

8. Software Requirements
9. Hardware Requirements
10. Results
11. Conclusion
12. Future Enhancements

# Introduction

- Product Comparator aims to facilitate effortless product comparison, addressing the common consumer dilemma of selecting between similar items.
- Its functionality enables users to compare products simultaneously, whether from the same e-commerce platform or across different websites.
- By presenting concise product descriptions and offering price comparisons, the Product Comparator reduces the likelihood of post-purchase regret.

## Problem Definition

- To develop a website that simplifies decision-making by comparing products and prices based on customer requirements.

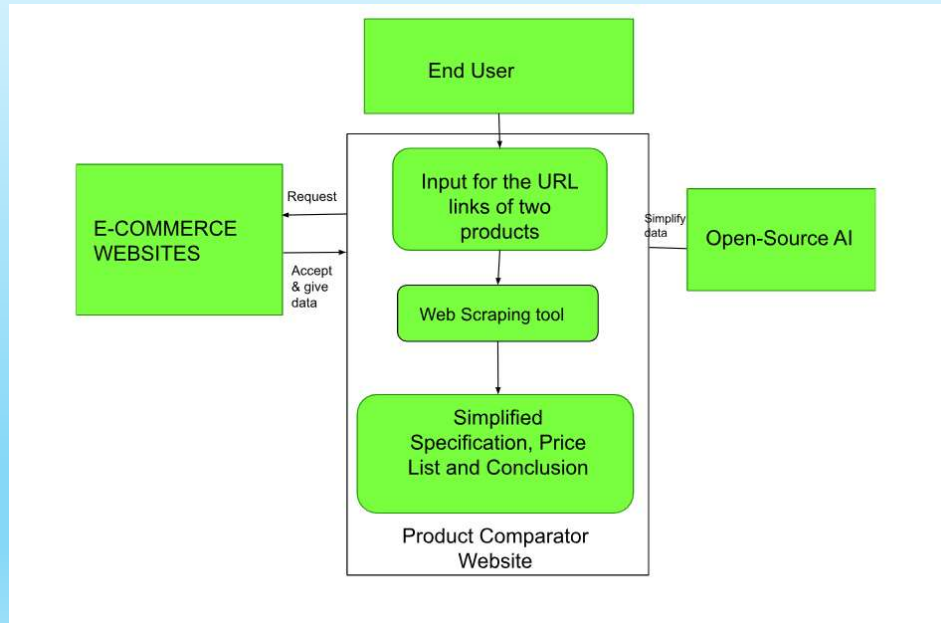

# Objectives

- Implement web-scraping techniques to extract product price and information from commercial websites.
- Analyze and compare the data obtained.
- Use AI to simplify and expand upon the extracted details in readable format.
- Develop a user-friendly interface for seamless product comparison across multiple e-commerce platforms.

# Scope and Relevance

- The Product Comparator is a web application designed to simplify the process of product comparison for end-users.
- Through this platform, users can input links to product websites, allowing the software to retrieve and streamline product descriptions while simultaneously identifying the best prices available.
- By presenting concise product descriptions and offering price comparisons, the Product Comparator reduces the likelihood of post-purchase regret.

# System Design

## Module-wise Explanation

### 1. End user:

Users interact with the system by pasting website links into the designated text box. Clicking on the "Compare" button triggers the system to execute a comparison algorithm which presents the results, offering users a comprehensive comparison of products.

### 2. E-commerce Websites:

E-commerce websites serve as digital marketplaces where users can browse and purchase a wide range of products.

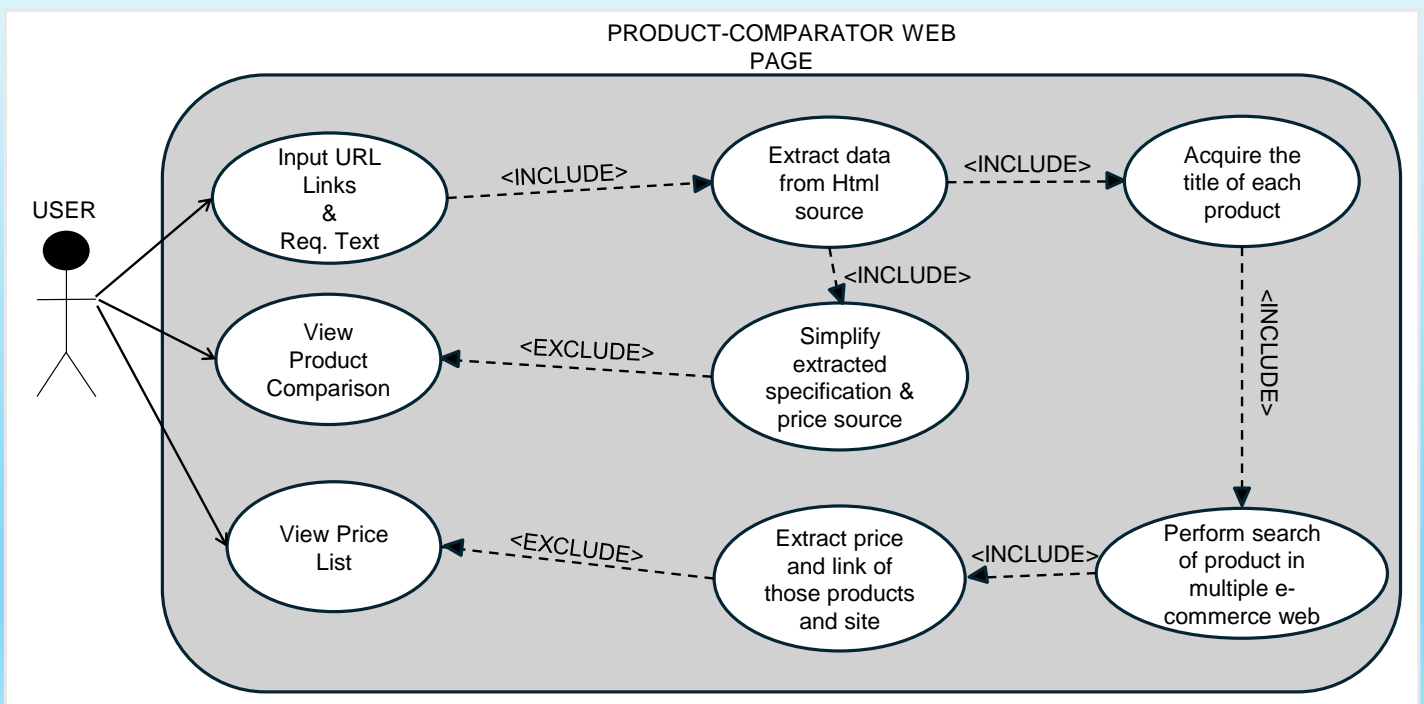

### 3. Web Scraping:

Utilizing BeautifulSoup (perhaps Scrapy, and Selenium) the system extracts essential price and specification data from websites, organizing it into a structured list format for further processing.

### 4. Open-source AI:

The structured data is then seamlessly fed into an open-source AI framework for simplification, enhancing user comprehension of product details.

## Use Case Diagram

# Datasets

- When the end user clicks on the "compare" button, the system extracts datasets comprising price and specifications directly from the selected website.
- These datasets are instantly stored in a list format. Subsequently, the system converts this list into a string format, simplifying it for easy comprehension.

# Gantt Chart

# Hardware Requirements

## **Operating System and Version**

- The software is designed to be platform-independent and compatible with multiple operating systems, including:
  - Windows: Versions 7, 8, 10 & 11
  - macOS: Versions 10.12 (Sierra) and above
  - Linux: Various distributions such as Ubuntu, Fedora, and CentOS

# Software Requirements

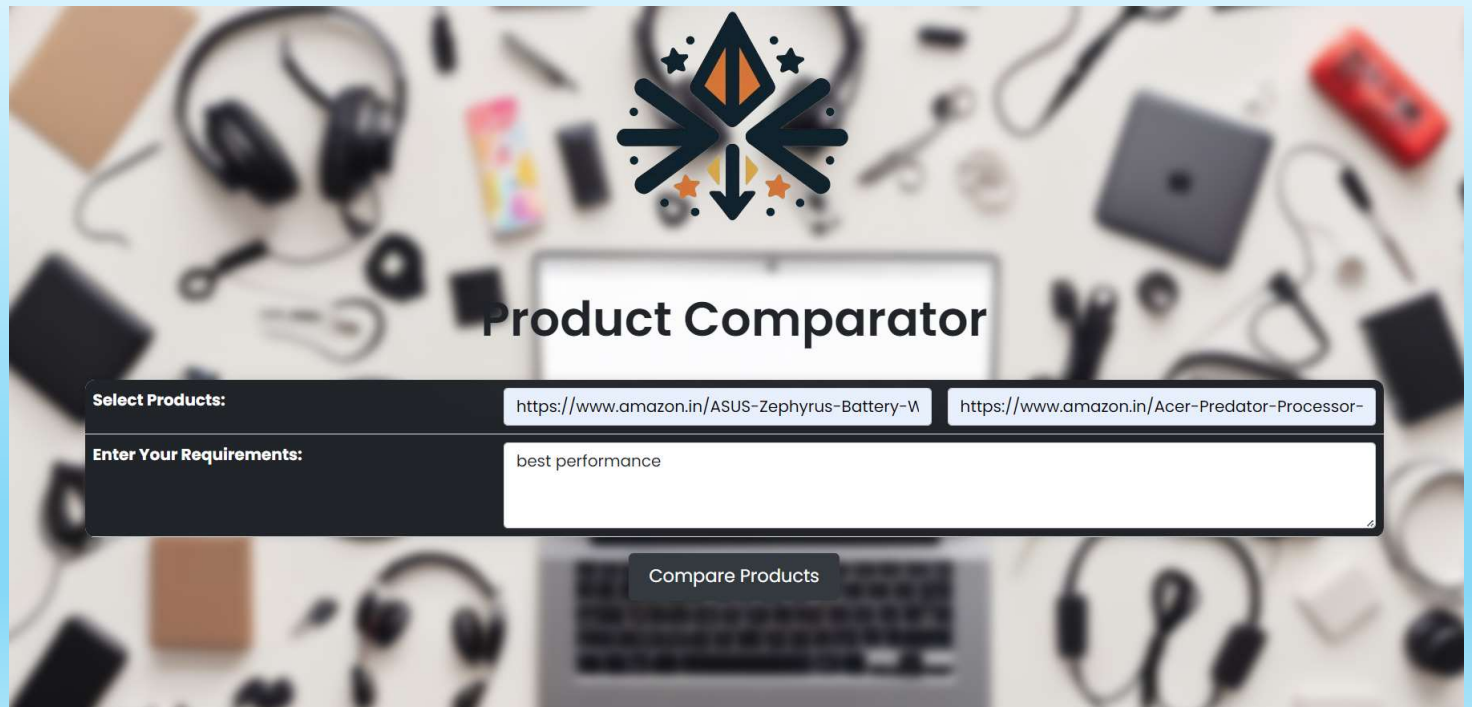

## **Languages used**

- Python Flask, HTML, CSS, JavaScript

## **Web Browser Compatibility**

- The software will operate within a web browser environment and should be compatible with commonly used web browsers, including:
  - Google Chrome, Mozilla Firefox, Safari, etc.

# Result

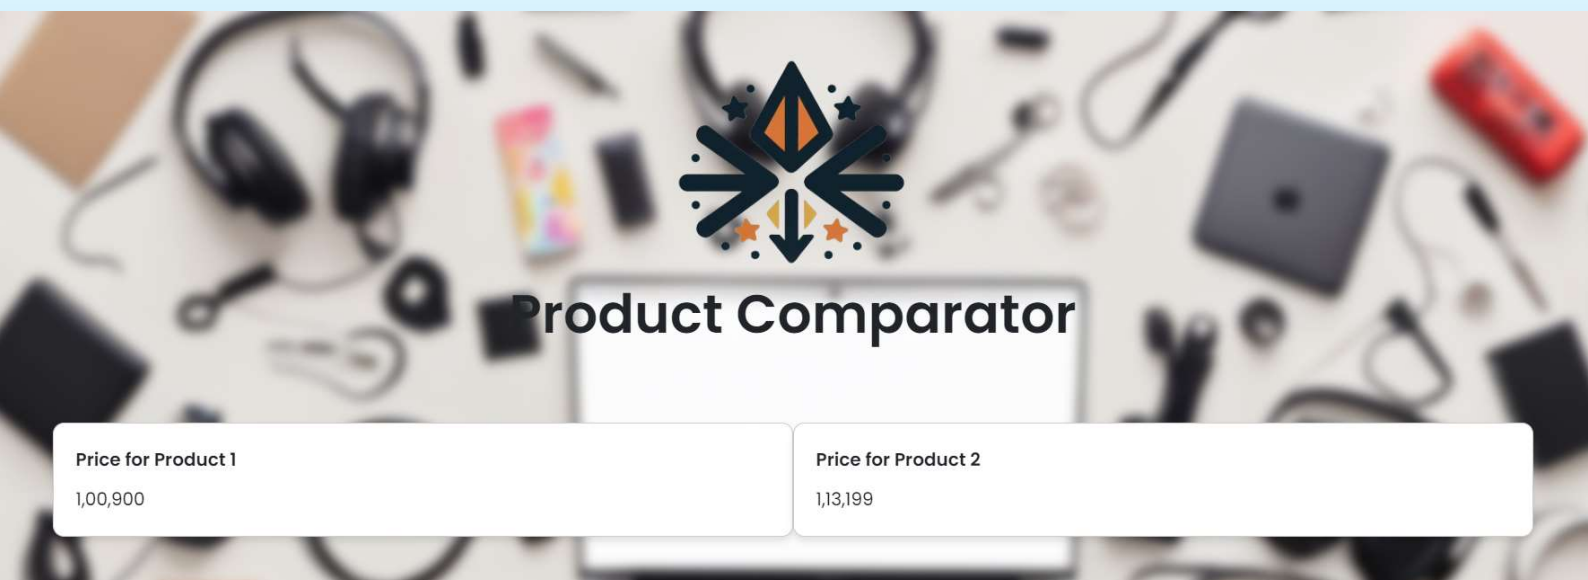

The image shows a web interface for a 'Product Comparator'. At the top center is a logo consisting of a stylized star or flower shape with four arrows pointing outwards, colored in blue, orange, and yellow. Below the logo, the text 'Product Comparator' is displayed in a large, bold, black font. Underneath this, there are two input fields. The first field is labeled 'Select Products:' and contains two URLs: 'https://www.amazon.in/ASUS-Zephyrus-Battery-V' and 'https://www.amazon.in/Acer-Predator-Processor-'. The second field is labeled 'Enter Your Requirements:' and contains the text 'best performance'. Below these fields is a button labeled 'Compare Products'.

**Product Comparator**

Select Products:

Enter Your Requirements:

The image shows the same web interface as above, but now displaying the results of the comparison. The 'Product Comparator' title and logo remain at the top. Below the title, there are two white boxes. The left box is labeled 'Price for Product 1' and contains the value '1,00,900'. The right box is labeled 'Price for Product 2' and contains the value '1,13,199'.

Name: ASUS ROG Zephyrus G14  
Manufacturer: ASUS, INVENTEC (CHONGQING) CORPORATION  
Model: GA402NJ-L8094WS  
Year: 2023

- Specifications:
- Dimensions: 49.6 x 15.5 x 49.6 cm; 1.65 kg
  - Battery: 1 Lithium Ion (included)
  - RAM: 16 GB DDR5, expandable up to 24 GB
  - Storage: 512 GB SSD
  - Processor: AMD Ryzen 7 2700U, 4.7 GHz
  - Graphics: NVIDIA GeForce RTX 3050, 6 GB GDDR6
  - Operating System: Windows 11 Home
  - Display: 14" LCD, 2560 x 1600 pixels, 165 Hz
  - Special Features: HD Audio, Backlit Keyboard, Anti Glare Coating
  - Connectivity: Bluetooth, Wi-Fi, USB, Ethernet, HDMI
  - Ports: 4x USB, 1x 3.5mm Audio, USB Type C

- Included Software:
- Microsoft Office 2021
  - McAfee Antivirus (1 Year Validity)

Packaging: Laptop, Adapter,

Result for Product 2

Name: Acer Predator Helios 16 Laptop  
Description: A high-performance gaming laptop with advanced features for immersive gaming experiences.

- Specifications:
- Brand: Acer
  - Series: Predator Helios 16
  - Colour: Black
  - Form Factor: Laptop
  - Processor: Intel Core i7
  - RAM Size: 16 GB (DDR5, expandable up to 32 GB)
  - Hard Drive: 1 TB SSD
  - Graphics: NVIDIA GeForce RTX 4050 (6 GB GDDR6)
  - Operating System: Windows 11 Home
  - Screen Size: 16 inches, 1920 x 1200 pixels resolution
  - Connectivity: Wi-Fi
  - Battery: Lithium-ion, up to 6 hours of average battery life
  - Weight: 2.6 kg
  - Dimensions: 56.4 x 8.6 x 56.4 cm
  - Power Source: Battery Powered (230 Volts)
  - Included Components: Laptop, Power cord, Adapter, User Manual
  - Manufacturer: Acer
  - Country of Origin: China
  - Customer Reviews: 4.3 out of 5 stars
  - Best Sellers Rank: #6,213 in Computers & Accessories
  - Date First Available: 25 April

Conclusion

- Product 1:
  - Known for its exceptional performance.
  - Reasonably priced.
  - Good value for money.
- Product 2:
  - Offers superior performance.
  - Slightly higher in price compared to Product 1.
  - Might provide a better overall user experience in terms of performance.

## Conclusion

- Product Comparator, the one stop solution to facilitate seamless product comparison and end all post-purchase regret.
- Product Comparator offers a dual feature set:
  - It enables seamless comparison of product specifications
  - and enables seamless prices across various e-commerce platforms.

# Future Enhancements

- **User Review and Ratings**-display user reviews and ratings from various sources.
- **Developing and Utilizing dedicated ML Model**-This ML Model will help in distinguishing the different genres of the products.
- **Personalized Recommendations**- creating an algorithm to analyze user preferences and browsing history to provide personalized product recommendations after each comparisons.

## **Appendix B: Vision, Mission, Programme Outcomes and Course Outcomes**

**DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING**  
**RAJAGIRI SCHOOL OF ENGINEERING & TECHNOLOGY (AUTONOMOUS)**  
**RAJAGIRI VALLEY, KAKKANAD, KOCHI, 682039**  
**(Affiliated to APJ Abdul Kalam Technological University)**

**Vision, Mission, Programme Outcomes and Course Outcomes**

**Institute Vision**

To evolve into a premier technological institution, moulding eminent professionals with creative minds, innovative ideas and sound practical skill, and to shape a future where technology works for the enrichment of mankind.

**Institute Mission**

To impart state-of-the-art knowledge to individuals in various technological disciplines and to inculcate in them a high degree of social consciousness and human values, thereby enabling them to face the challenges of life with courage and conviction.

**Department Vision**

To become a centre of excellence in Computer Science and Engineering, moulding professionals catering to the research and professional needs of national and international organizations.

**Department Mission**

To inspire and nurture students, with up-to-date knowledge in Computer Science and Engineering, ethics, team spirit, leadership abilities, innovation and creativity to come out with solutions meeting societal needs.

### **Programme Outcomes (PO)**

Engineering Graduates will be able to:

- 1. Engineering Knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- 2. Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- 3. Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- 4. Conduct investigations of complex problems:** Use research-based knowledge including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- 5. Modern Tool Usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- 6. The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- 7. Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- 8. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- 9. Individual and Team work:** Function effectively as an individual, and as a member or leader in teams, and in multidisciplinary settings.

**10. Communication:** Communicate effectively with the engineering community and with society at large. Be able to comprehend and write effective reports documentation. Make effective presentations, and give and receive clear instructions.

**11. Project management and finance:** Demonstrate knowledge and understanding of engineering and management principles and apply these to one's own work, as a member and leader in a team. Manage projects in multidisciplinary environments.

**12. Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

### **Programme Specific Outcomes (PSO)**

A graduate of the Computer Science and Engineering Program will demonstrate:

#### **PSO1: Computer Science Specific Skills**

The ability to identify, analyze and design solutions for complex engineering problems in multidisciplinary areas by understanding the core principles and concepts of computer science and thereby engage in national grand challenges.

#### **PSO2: Programming and Software Development Skills**

The ability to acquire programming efficiency by designing algorithms and applying standard practices in software project development to deliver quality software products meeting the demands of the industry.

#### **PSO3: Professional Skills**

The ability to apply the fundamentals of computer science in competitive research and to develop innovative products to meet the societal needs thereby evolving as an eminent researcher and entrepreneur.

### **Course Outcomes**

After the completion of the course the student will be able to:

#### **CO1:**

Identify technically and economically feasible problems (Cognitive Knowledge Level: Apply)

**CO2:**

Identify and survey the relevant literature for getting exposed to related solutions and get familiarized with software development processes (Cognitive Knowledge Level: Apply)

**CO3:**

Perform requirement analysis, identify design methodologies and develop adaptable & reusable solutions of minimal complexity by using modern tools & advanced programming techniques (Cognitive Knowledge Level: Apply)

**CO4:**

Prepare technical report and deliver presentation (Cognitive Knowledge Level: Apply)

**CO5:**

Apply engineering and management principles to achieve the goal of the project (Cognitive Knowledge Level: Apply)

## Appendix C: CO-PO-PSO Mapping

## COURSE OUTCOMES:

After completion of the course the student will be able to

## JUSTIFICATIONS FOR CO-PO MAPPING

MAPPING	LOW/ MEDIUM/ HIGH	JUSTIFICATION
101003/CS6 22T.1-PO1	<b>HIGH</b>	Identify technically and economically feasible problems by applying the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
101003/CS6 22T.1-PO2	<b>HIGH</b>	Identify technically and economically feasible problems by analysing complex engineering problems reaching substantiated conclusions using first principles of mathematics.
101003/CS6 22T.1-PO3	<b>HIGH</b>	Design solutions for complex engineering problems by identifying technically and economically feasible problems.
101003/CS6 22T.1-PO4	<b>HIGH</b>	Identify technically and economically feasible problems by analysis and interpretation of data.
101003/CS6 22T.1-PO6	<b>MEDIUM</b>	Responsibilities relevant to the professional engineering practice by identifying the problem.
101003/CS6 22T.1-PO7	<b>MEDIUM</b>	Identify technically and economically feasible problems by understanding the impact of the professional engineering solutions.
101003/CS6 22T.1-PO8	<b>HIGH</b>	Apply ethical principles and commit to professional ethics to identify technically and economically feasible problems.
101003/CS6 22T.1-PO9	<b>MEDIUM</b>	Identify technically and economically feasible problems by working as a team.
101003/CS6 22T.1-PO10	<b>MEDIUM</b>	Communicate effectively with the engineering community by identifying technically and economically feasible problems.
101003/CS6 22T.1-P011	<b>MEDIUM</b>	Demonstrate knowledge and understanding of engineering and management principles by selecting the technically and economically feasible problems.
101003/CS6 22T.1-PO12	<b>HIGH</b>	Identify technically and economically feasible problems for long term learning.
101003/CS6 22T.1-PSO1	<b>MEDIUM</b>	Ability to identify, analyze and design solutions to identify technically and economically feasible problems.
101003/CS6 22T.1-PSO2	<b>MEDIUM</b>	By designing algorithms and applying standard practices in software project development and Identifying technically and economically feasible problems.
101003/CS6 22T.1-PSO3	<b>MEDIUM</b>	Fundamentals of computer science in competitive research can be applied to Identify technically and economically feasible problems.
101003/CS6 22T.2-PO1	<b>HIGH</b>	Identify and survey the relevant by applying the knowledge of mathematics, science, engineering fundamentals.

101003/CS6 22T.2-PO2	<b>HIGH</b>	Identify, formulate, review research literature, and analyze complex engineering problems get familiarized with software development processes.
101003/CS6 22T.2-PO3	<b>HIGH</b>	Design solutions for complex engineering problems and design based on the relevant literature.
101003/CS6 22T.2-PO4	<b>HIGH</b>	Use research-based knowledge including design of experiments based on relevant literature.
101003/CS6 22T.2-PO5	<b>HIGH</b>	Identify and survey the relevant literature for getting exposed to related solutions and get familiarized with software development processes by using modern tools.
101003/CS6 22T.2-PO6	<b>MEDIUM</b>	Create, select, and apply appropriate techniques, resources, by identifying and surveying the relevant literature.
101003/CS6 22T.2-PO8	<b>HIGH</b>	Apply ethical principles and commit to professional ethics based on the relevant literature.
101003/CS6 22T.2-PO9	<b>MEDIUM</b>	Identify and survey the relevant literature as a team.
101003/CS6 22T.2-PO10	<b>HIGH</b>	Identify and survey the relevant literature for a good communication to the engineering fraternity.
101003/CS6 22T.2-PO11	<b>MEDIUM</b>	Identify and survey the relevant literature to demonstrate knowledge and understanding of engineering and management principles.
101003/CS6 22T.2-PO12	<b>HIGH</b>	Identify and survey the relevant literature for independent and lifelong learning.
101003/CS6 22T.2-PSO1	<b>MEDIUM</b>	Design solutions for complex engineering problems by Identifying and survey the relevant literature.
101003/CS6 22T.2-PSO2	<b>MEDIUM</b>	Identify and survey the relevant literature for acquiring programming efficiency by designing algorithms and applying standard practices.
101003/CS6 22T.2-PSO3	<b>MEDIUM</b>	Identify and survey the relevant literature to apply the fundamentals of computer science in competitive research.
101003/CS6 22T.3-PO1	<b>HIGH</b>	Perform requirement analysis, identify design methodologies by using modern tools & advanced programming techniques and by applying the knowledge of mathematics, science, engineering fundamentals.
101003/CS6 22T.3-PO2	<b>HIGH</b>	Identify, formulate, review research literature for requirement analysis, identify design methodologies and develop adaptable & reusable solutions.

101003/CS6 22T.3-PO3	<b>HIGH</b>	Design solutions for complex engineering problems and perform requirement analysis, identify design methodologies.
101003/CS6 22T.3-PO4	<b>HIGH</b>	Use research-based knowledge including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
101003/CS6 22T.3-PO5	<b>HIGH</b>	Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools.
101003/CS6 22T.3-PO6	<b>MEDIUM</b>	Perform requirement analysis, identify design methodologies and assess societal, health, safety, legal, and cultural issues.
101003/CS6 22T.3-PO7	<b>MEDIUM</b>	Understand the impact of the professional engineering solutions in societal and environmental contexts and Perform requirement analysis, identify design methodologies and develop adaptable & reusable solutions.
101003/CS6 22T.3-PO8	<b>HIGH</b>	Perform requirement analysis, identify design methodologies and develop adaptable & reusable solutions by applying ethical principles and commit to professional ethics.
101003/CS6 22T.3-PO9	<b>MEDIUM</b>	Function effectively as an individual, and as a member or leader in teams, and in multidisciplinary settings.
101003/CS6 22T.3-PO10	<b>MEDIUM</b>	Communicate effectively with the engineering community and with society at large to perform requirement analysis, identify design methodologies.
101003/CS6 22T.3-PO11	<b>MEDIUM</b>	Demonstrate knowledge and understanding of engineering requirement analysis by identifying design methodologies.
101003/CS6 22T.3-PO12	<b>HIGH</b>	Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change by analysis, identify design methodologies and develop adaptable & reusable solutions.
101003/CS6 22T.3-PSO3	<b>MEDIUM</b>	The ability to apply the fundamentals of computer science in competitive research and prior to that perform requirement analysis, identify design methodologies.
101003/CS6 22T.4-PO1	<b>MEDIUM</b>	Prepare technical report and deliver presentation by applying the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
101003/CS6 22T.4-PO2	<b>HIGH</b>	Identify, formulate, review research literature, and analyze complex engineering problems by preparing technical report and deliver presentation.

101003/CS6 22T.4-PO3	<b>MEDIUM</b>	Prepare Design solutions for complex engineering problems and create technical report and deliver presentation.
101003/CS6 22T.4-PO4	<b>MEDIUM</b>	Use research-based knowledge including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions and prepare technical report and deliver presentation.
101003/CS6 22T.4-PO5	<b>MEDIUM</b>	Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools and Prepare technical report and deliver presentation.
101003/CS6 22T.4-PO8	<b>HIGH</b>	Prepare technical report and deliver presentation by applying ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
101003/CS6 22T.4-PO9	<b>HIGH</b>	Prepare technical report and deliver presentation effectively as an individual, and as a member or leader in teams, and in multidisciplinary settings.
101003/CS6 22T.4-PO10	<b>HIGH</b>	Communicate effectively with the engineering community and with society at large by prepare technical report and deliver presentation.
101003/CS6 22T.4-PO11	<b>MEDIUM</b>	Demonstrate knowledge and understanding of engineering and management principles and apply these to one's own work by prepare technical report and deliver presentation.
101003/CS6 22T.4-PO12	<b>HIGH</b>	Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change by prepare technical report and deliver presentation.
101003/CS6 22T.4-PSO1	<b>MEDIUM</b>	Prepare a technical report and deliver presentation to identify, analyze and design solutions for complex engineering problems in multidisciplinary areas.
101003/CS6 22T.4-PSO2	<b>MEDIUM</b>	To acquire programming efficiency by designing algorithms and applying standard practices in software project development and to prepare technical report and deliver presentation.
101003/CS6 22T.4-PSO3	<b>MEDIUM</b>	To apply the fundamentals of computer science in competitive research and to develop innovative products to meet the societal needs by preparing technical report and deliver presentation.
101003/CS6 22T.5-PO1	<b>HIGH</b>	Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
101003/CS6 22T.5-PO2	<b>HIGH</b>	Identify, formulate, review research literature, and analyze complex engineering problems by applying engineering and management principles to achieve the goal of the project.

101003/CS6 22T.5-PO3	<b>HIGH</b>	Apply engineering and management principles to achieve the goal of the project and to design solutions for complex engineering problems and design system components or processes that meet the specified needs.
101003/CS6 22T.5-PO4	<b>MEDIUM</b>	Apply engineering and management principles to achieve the goal of the project and use research-based knowledge including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
101003/CS6 22T.5-PO5	<b>MEDIUM</b>	Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools and to apply engineering and management principles to achieve the goal of the project.
101003/CS6 22T.5-PO6	<b>MEDIUM</b>	Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities by applying engineering and management principles to achieve the goal of the project.
101003/CS6 22T.5-PO7	<b>MEDIUM</b>	Understand the impact of the professional engineering solutions in societal and environmental contexts, and apply engineering and management principles to achieve the goal of the project.
101003/CS6 22T.5-PO8	<b>HIGH</b>	Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice and to use the engineering and management principles to achieve the goal of the project.
101003/CS6 22T.5-PO9	<b>MEDIUM</b>	Function effectively as an individual, and as a member or leader in teams, and in multidisciplinary settings and to apply engineering and management principles to achieve the goal of the project.
101003/CS6 22T.5-PO11	<b>MEDIUM</b>	Demonstrate knowledge and understanding of engineering and management principles and apply these to one's own work, as a member and leader in a team. Manage projects in multidisciplinary environments and to apply engineering and management principles to achieve the goal of the project.
101003/CS6 22T.5-PO12	<b>HIGH</b>	Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change and to apply engineering and management principles to achieve the goal of the project.
101003/CS6 22T.5-PSO1	<b>MEDIUM</b>	The ability to identify, analyze and design solutions for complex engineering problems in multidisciplinary areas. Apply engineering and management principles to achieve the goal of the project.

101003/CS6 22T.5-PSO2	<b>MEDIUM</b>	The ability to acquire programming efficiency by designing algorithms and applying standard practices in software project development to deliver quality software products meeting the demands of the industry and to apply engineering and management principles to achieve the goal of the project.
101003/CS6 22T.5-PSO3	<b>MEDIUM</b>	The ability to apply the fundamentals of computer science in competitive research and to develop innovative products to meet the societal needs thereby evolving as an eminent researcher and entrepreneur and apply engineering and management principles to achieve the goal of the project.
